# The WHEAT SITUATION

WS-166

### World Wheat Trade Up Slightly; U.S.S.R. Again No. 3 Exporter

USDA

FAS-NEG. 1956

World wheat exports in 1958-59 totaled 1, 259 million bushels, 5 percent below the record high level of 1956-57 but 26 percent above the 1951-55 average.

Dominant features in 1958-59 were a marked decline in French exports and a substantial increase in exports by the U.S.S.R., a large part of which went to non-Communist areas.

French exports, which reached over 83 million bushels in 1957-58, fell to about 39 million in 1958-59. Soviet wheat exports are believed to have reached a modern-day record.

Exports from the U.S., Argentina and Australia were all above a year earlier while those from Canada were below.

#### SUMMARY

The total U. S. wheat supply for the marketing year beginning July 1, 1959, estimated at 2,402 million bushels, an all-time record, is practically unchanged from the August report. It exceeds the previous peak last year by about 50 million bushels, or 2 percent, and the 1957-58 year by about 530 million bushels, or 28 percent. A sharp increase in the carryover from last year more than offsets a 24 percent reduction in this year's crop.

Domestic disappearance in 1959-60 is estimated at about 625 million bushels, slightly less than last year. Exports are expected to total about 410 million bushels, somewhat smaller than the 443 million exported in 1958-59. On the basis of these estimates, the carryover July 1, 1960 would total about 1,365 million bushels. This compares with 1,277 million bushels this year and with 881 million on July 1, 1958.

Analysis of supply and distribution by classes shows a further substantial increase in the prospective carryover of hard red winter wheat next July 1, little or no change in the prospective carryover of soft red winter and moderate reductions in the prospective carryover stocks of hard red spring, durum and white wheats.

<sup>1/</sup> The figures in this table are approximations as they are not based on survey or enumeration data. See the Wheat Situation, August 1959, page 12, footnote to table 5 for detailed explanation.

<sup>2/</sup> Includes shipments to U. S. Territories of about 4 million bushels. Alaska and Hawaii are now States.

<sup>3</sup>/ Carryover of soft red winter wheat was abnormally low in 1958. The 1943-52 average was 19 million bushels.

Market prices now are generally at the highest level of the marketing year to date. For this time of the year, prices are higher than usual relative to the support level and are above a year ago. The relative strength in prices this year reflects the large quantities withheld from the market and a smaller crop than last year.

This year's world wheat production, forecast at 7.9 billion bushels, is 9 percent down from the record in 1958, but is about 13 percent above the 1950-54 average. The decline from last year is mostly in the crops of the United States and the Soviet Union. Both countries had record wheat crops in 1958.

The total volume of 1958-59 world trade in wheat and flour is now estimated at 1,259 million bushels. This is 70 million above 1957-58 and about 69 million below the record high of 1,328 million in 1956-57. The prominent features of last season's world trade were (1) a marked decline in French exports and (2) a substantial increase in exports to non-Communist areas by the U.S.S.R.

Current indications are that no significant change is likely in world trade of wheat and flour in 1959-60 from a year ago. Imports into European countries may decline 40 to 50 million bushels from last year, but larger imports are likely into South Asia and Latin America. Argentina, Turkey and Italy all have somewhat less wheat to export this year, while Australia, France and Spain have considerably more. On the whole, increased competition from other exporting countries is likely to reduce both United States and Canadian exports from last year's levels.

This year's world rye crop is forecast at 1.4 billion bushels, down about 4 percent from the 1958 total of 1.46 billion bushels. Most of the decrease appears to be in the Soviet Union. Little change is estimated from last year's high level in Poland and West and East Germany.

#### THE DOMESTIC WHEAT SITUATION AND OUTLOOK

## Some Increase in Carryover Expected July 1, 1960

The total U. S. wheat supply for the marketing year which began July 1, 1959, estimated at 2,402 million bushels, is an all-time high (table 1). It exceeds the previous peak last year by about 50 million bushels, or 2 percent, and the 1957-58 year by about 530 million bushels, or 28 percent. A sharp increase in the carryover from last year more than offsets a 24 percent reduction in this year's crop.

Supply this year consists of the carryover July 1, 1959 of 1,277 million bushels, the crop estimated as of October 1 at 1,117 million and an allowance for imports of about 8 million bushels, mostly of feeding quality wheat.

<sup>1/</sup> Cash grain closing prices are not the range of cash sales during the day but are on-track cash prices established at the close of the market. The terminal rate is a rate used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county price support rates. The effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. A comparison of the above effective price support rate and the current cash closing price is an indication of whether the market price is above or below the support rate provided the location of the grain is on track at the specified terminals. The monthly average price is the simple average of the daily closing prices.

<sup>2/</sup> Galveston effective and terminal support price. The cash price at Fort Worth is usually backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Fort Worth may usually be compared with the effective support price at Galveston. A terminal support price is not established for Fort Worth.

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

Domestic disappearance in 1959-60 is estimated at about 625 million bushels, slightly less than the 631 million last year. Exports are expected to total about 410 million bushels, slightly smaller than the 443 million exported in 1958-59. On the basis of these estimates, the carryover July 1, 1960 would total about 1,365 million bushels. This compares with 1,277 million bushels this year and 881 million on July 1, 1958. This prospective carryover in 1960 would be over 5 times the 256 million bushels in 1952, at a time when wartime demands had drawn wheat stocks down to low levels.

Prospects Are for Larger

Stocks of Hard Red Winter,

Little Change in Soft Red and

Smaller Stocks of Other Classes

Analysis of supply and distribution by classes shows a further substantial increase in the prospective carryover of hard red winter wheat next July 1. Little or no change is expected in the carryover of soft red winter, and moderate reductions are indicated for prospective carryovers of hard red spring, durum and white wheats.

Table 2 shows supply and distribution by classes for the past 2 years and for 1959-60 projected. The table also shows quantity and percentage changes in the expected carryover by classes July 1, 1960 compared with 1959.

## 1959 Crop Sharply Below Last Year's Record but 4 Percent Above Average

Production of <u>all</u> <u>wheat</u> was estimated as of October 1 at 1,117 million bushels, slightly above the September 1 estimate, reflecting an increase of about 1 million bushels in spring wheat other than durum. The August 1 estimate of winter wheat at 909 million bushels is carried forward. The estimated production of all wheat is 24 percent below the record 1958 production but 4 percent above the 1948-57 average of 1,075 million bushels. Prospective yield per harvested acre of all wheat at 21.0 bushels is the third highest of record, but sharply below the record 1958 yield of 27.3 bushels.

Production of <u>durum</u> wheat in the Dakotas, Minnesota and Montana was estimated at 20.5 million bushels, practically the same as last month but 7 percent below the previous year and nearly a third less than average. The indicated yield of 16.2 bushels falls below last year's 23.8 bushels but is above the 12.2-bushel average.

Production of <u>spring wheat other than durum</u>, estimated at 188 million bushels, increased nearly 1 million bushels over last month but remained 28 percent below last year's 260 million bushels and 19 percent below the 1948-57 average of 231 million bushels. Moderate losses in Minnesota were more than offset by improvement in Montana. The indicated yield of 16.5 bushels per harvested acre is well below last year's record 23.4 bushels but slightly above the 15.4-bushel average yield.

1/ Imports of wheat of milling quality have been limited to a quota of 800,000 bushels per year since May 29, 1941, of which 795,000 may come from Canada. During the war years 1943-44 and 1944-45 this import restriction was waived. Imports of registered and certified wheat seed are permitted ex-quota. 2/ Imports of flour have been limited to a quota of 4,000,000 pounds per year since May 29, 1941, of which 3,815,000 pounds may come from Canada (total quota is 93,200 bushels, wheat equivalent). Flour for special experimental purposes may be imported ex-quota. Excludes flour "free for export". 3/ Consists of macaroni, spaghetti and similar products, wheat cereal breakfast foods, bread and biscuits, semolina and prepared mixes. 4/ Includes wheat and wheat products used for livestock and poultry feed, imported duty-free by the Commodity Credit Corporation. 5/ Reported by the National military establishments. 6/ Usually all from imported wheat, although in some years small quantities of United States wheat were added. 7/ 14,072,000 reported plus 822,000 unreported exports to Bermany, financed by the United Kingdom. 9/ 154,407,000 reported plus 11,358,000 unreported exports to Germany, financed by the United Kingdom. 10/ 184,324,000 reported plus 23,038,000 unreported exports to Germany, financed by the United Kingdom. 12/ Includes exports for relief or charity by individuals and private agencies. 13/ Preliminary.

Bureau of Foreign and Domestic Commerce and Bureau of the Census except where noted.

## U. S. Wheat and Flour Exports To Decline in 1959-60 1/

U. S. exports of wheat and wheat flour in 1959-60 are likely to fall some 30 million bushels short of the 443 million reached in 1958-59. Losses are expected to be the greatest in sales to traditional dollar markets of Western Europe. Shipments under Government export programs, on the other hand, should hold to last year's level or even increase slightly. 2/

Foreign demand, as a whole, is little changed from a year ago. Import needs in Europe are down substantially from 1958-59, but this appears to be offset by greater demands in southern Asia and Latin America.

The principal factor expected to cause a reduction in U. S. exports this year is increased competition from other exporters. Australia and France have much more wheat available for export this year than last. Their wheats are similar in quality to those offered by the U. S. and their traditional outlets have also been important cash customers for U. S. wheat. A few exporting countries, such as Italy and Argentina, will have less to export this year than in 1958-59, but this will not be sufficient to offset the increased export availabilities that exist elsewhere.

## Wheat Prices Higher than Usual Relative to Price Supports

Wheat prices at terminal markets advanced 2 to 8 cents from mid-August to mid-October, reaching the highest levels of the season to date in most markets. Compared with a year earlier, the prices of the dominant class and grade at principal markets on October 19 were as follows: Kansas City and Minneapolis, 9 and 7 cents higher, respectively; while St Louis was 1 cent lower and Portland, 7 cents lower.

Market prices for this time of the year are higher than usual relative to the support level. Prices on October 19 compared with the effective support rate (year earlier shown in parentheses) were as follows: No. 1 Dark Northern Spring, ordinary protein, at Minneapolis, at \$2.15 was 3 cents above (5 cents below); No. 1 Soft White at Portland, at \$1.98 was 2 cents above (2 cents below); No. 2 Hard Red Winter, ordinary protein, at Kansas City, at \$2.02 was 2 cents below (14 cents below) and No. 2 Soft Red Winter at St. Louis, at \$1.98 was 6 cents below (9 cents below). High-protein hard red winter wheat, and ordinary and high-protein spring wheat are selling above the effective loan but producers are reluctant to sell. Undoubtedly, many farmers want to delay sales until the next tax year because of heavy sales in early 1959 from the 1958 record crop.

<sup>1/</sup> Prepared by the Grain Division, Foreign Agricultural Service.

<sup>2/</sup> Total exports and Government exports by programs, 1948-58 are shown in the Wheat Situation, August 1959, page 22, table 10.

<sup>1/</sup> The national average loan rate at the farm as a percentage of the parity price of wheat at the beginning of the marketing year.

<sup>2/</sup> Includes deliveries of purchase-agreement wheat to CCC.
3/ Includes open-market purchases, if any, beginning in 1943, and accordingly may include some new-crop wheat.
4/ For example, 52.2 million is 1958 crop wheat under loan on June 30, 1959.

<sup>5/</sup> Includes the following quantities put under purchase agreements in million bushels, beginning in 1948, as follows:

<sup>1948-</sup>crop wheat, 112.0; 1949-crop wheat, 45.5; 1950-crop wheat, 8.6; 1951-crop wheat, 13.4; 1952-crop wheat, 61.3; 1953-crop wheat, 63.2; 1954-crop wheat, 29.5; 1955-crop wheat, 43.5; 1956-crop wheat, 18.6; 1957-crop wheat, 34.9; 1958-crop wheat, 49.1 and 1959-crop, 0.3.

<sup>6/</sup> Preliminary.
7/ Through August 31, 1959.

Prices on October 19 were above the lows for the year, as follows: No. 2 Hard Red Winter, 16 cents above June 23; No. 1 Dark Northern Spring at Minneapolis, 7 cents above July 28; No. 1 Soft White at Portland, 8 cents above August 20 and No. 2 Soft Red Winter at St. Louis, 12 cents above the low price on June 23.

The relative strength in prices this year reflects the large quantities withheld from the market and a crop that is smaller than last year. Through August 30, farmers had put 174 million bushels of 1959-crop wheat under price support loan and purchase agreement. Last year through August 25, producers had put 238 million bushels of 1958-crop wheat under support. Production this year at 1,117 million bushels is 24 percent below the record crop of 1,462 million bushels last year. Through August 30, farmers had resealed 44.3 million bushels of 1958-crop wheat, extended reseal on 7.1 million of 1957-crop wheat and re-extended reseal on 1.6 million bushels of 1956-crop wheat.

Stocks owned by CCC on October 1 totaled 1,120 million bushels (tables 19, 20) which compares with 804 million bushels a year earlier and 785 million in 1957.

## 1960 Wheat Crop May Exceed 1959 Crop; Minimum Support at \$1.77

With the minimum national allotment of 55 million acres in effect for 1960, it is estimated that a little more than 53 million acres may be harvested. Should the 1956-59 average yield of 22.6 bushels be obtained, a crop of about 1.2 billion bushels would be produced. A crop of this size would be about 8 percent larger than the 1959 crop and would again exceed domestic requirements and exports, resulting in a further increase in the carryover. With domestic disappearance and exports the same as those estimated for 1959-60 (625 million and 410 million, respectively), the carryover July 1, 1961 would be increased by about 165 million bushels over the estimated carryover July 1, 1960.

The "advance" minimum national average support price of \$1.77 per bushel for 1960-crop wheat was announced on July 8. The average support price for the 1959 crop was \$1.81 and for 1958-crop wheat, \$1.82. The \$1.77-per-bushel minimum average support for 1960-crop wheat is 75 percent of the July 1959 modernized parity price of \$2.36 per bushel (announced June 30). This "advance" minimum price will not be reduced, but could be raised if the parity price at the beginning of the 1960 marketing year is higher.

#### THE WORLD WHEAT SITUATION

## World Trade in 1958-59 Exceeds Earlier Estimate 3/

The total volume of 1958-59 world wheat and flour trade, estimated previously at 1,220 million bushels, reached about 1,259 million bushels, according to preliminary tabulations. This is 70 million bushels above the

<sup>3/</sup> This and the following section were prepared by the Grain Division, Foreign Agricultural Service.

<sup>1/</sup> All data preliminary and subject to revision. 2/ Exports from U.S.S.R. are based on import data obtained from recipient countries and an FAS estimate of exports to Eastern Europe. 3/ Export data are based on import data obtained from recipient countries. 4/ Less than 50 metric tons. 5/ Through May 1950 only.

Grain Division, Foreign Agricultural Service.

final estimate of 1957-58 trade and about 69 million below the record high of 1,328 million in 1956-57.

The dominant features of last season's world trade were (1) a marked decline in French exports and (2) a substantial increase in exports to non-Communist areas by the U.S.S.R.

French exports, which reached over 83 million bushels in 1957-58, fell to about 39 million in 1958-59. Soviet wheat exports, meanwhile, are believed to have reached a modern-day record. Imports of Soviet wheat into non-Communist countries reached over 60 million bushels as compared to only about 16 million in 1957-58. As a result, Soviet wheat filled most of the gap left by the short supply of French wheat. Soviet wheat cut sharply into markets that otherwise might have been supplied with U. S. and Canadian wheat.

Increase in world trade last year was absorbed by Yugoslavia, India, Egypt, Brazil, United Kingdom and France. France was forced to import substantial quantities in order to maintain some of her traditional export markets.

## <u>Expected In 1959-60</u> Trade

Although earlier estimates predicted a small decline in world trade during the current year, indications currently show that little or no change is likely. Crop reverses in several countries—Turkey, Brazil and Uruguay—and in parts of Western Europe now appear to have been sufficient to hold import demand at or near last year's level. Imports into European countries may decline 40 to 50 million bushels from last year, but this is likely to be offset by increased imports into South Asia and Latin America.

Exportable supplies are generally higher than a year ago and pressure to sell has increased accordingly. Australia, France and Spain have considerably more wheat for export this year than last, and will probably to successful in selling all or most of these increases. Argentina, Turkey and Italy all have somewhat less to export during the current season, while the U. S. and Canada continue to hold supplies considerably in excess of what they will be able to sell abroad.

The net effect of the export supply situation, as it appeared in mid-October, will probably be a reduction in the exports of both Canada and the United States. Exportable supplies outside the United States and Canada are greater in relation to total import demand than in 1958-59. Thus, since these two countries have a vital interest in avoiding any serious disruption of world prices, they will likely be forced to yield to the increased competition by lowering their export volumes. Canadian exports, which reached 300 million bushels last year, will probably fall to 280 or 285 million bushels in 1959-60, while U. S. exports will do well to exceed 410 million.

## Wheat Supplies for Export and Carryover in 4 Exporting Countries Up 1 Percent from a Year Ago

Supplies of wheat remaining for export and carryover in 4 principal exporting countries—United States, Canada, Argentina and Australia—on October 1 totaled 2,586 million bushels, 37 million, or 1 percent, above a year earlier (table 8). This season's exports are above a year earlier for all four countries. U. S. exports of wheat and products in wheat equivalent, totaled 105 million bushels, 9 million more than a year earlier. Supplies remaining for export and carryover October 1, in million bushels, with last year's figures in parentheses were: United States, 1,673 (1,624); Canada, 757 (806); Argentina, 78 (88) and Australia, 78 (31).

# World Wheat Production Down From 1958 Record, But 13 Percent Above Average 4/

World wheat production in 1959, forecast at 7.9 billion bushels, is about 800 million bushels, or 9 percent, down from the record in 1958. It is, however, about 900 million bushels, or 13 percent, above the 1950-54 average (table 9). The decline is mostly in the crops of the United States and the Soviet Union. Both of these countries had record wheat crops in 1958. In recent years these countries together have accounted for about 40 percent of world wheat production.

Forecasts of world production this early in the season are subject to considerable revision, as seeding of small grains has only recently been completed in Southern Hemisphere countries and growing conditions up to December 1 will play a large part in determining final outturns in those areas. Reliable crop estimates are also lacking from some countries in the Northern Hemisphere.

Larger wheat crops in some European countries this year may result in reduced import needs in Western Europe. In that area, France's near-record crop provides a substantial surplus available for export. A record crop is reported for Spain and, for the first time, that country is an exporter under the International Wheat Agreement. Italy also is now listed as an IWA exporter but had a comparatively poor crop this year.

The United States may encounter increased competition from Eastern Europe where a large crop this year brings production 95 million bushels above the 1958 total. The largest increase is in Yugoslavia where the crop was 65 percent above the 1958 crop and a new record. Much of the surplus will be stockpiled, but shortage of storage space will create serious problems, especially when the record corn crop is harvested.

<sup>4/</sup> World wheat and rye production from Foreign Crops and Markets, September 24, 1959, pages 16-21, with revisions.

North America's wheat production this year is estimated at 1,587 million bushels, compared with 1,881 million in 1958. The reduction of 294 million bushels is due to the drop in U. S. production; both Canada and Mexico report small increases. The October estimate placed U. S. production at 1,117 million bushels compared with the record 1,462 million last year. Canada's September forecast of 421 million bushels, though above the small outturns of the past 2 years, is 22 percent below the 1950-54 average. Canada's acreage in 1959 was 10 percent larger than in 1958 and yields 3 percent larger. Mexico's current crop of 48 million bushels has been exceeded in only one year--1957.

Western Europe's 1959 wheat crop is estimated at 1,385 million bushels, 45 million above last year's total. Acreage was smaller but yields were up. Earlier-season fears that drought damage would reduce yields were unfounded. Most of the wheat in Europe is winter-grown; winter grains suffered little damage, in contrast with spring grains, which had reduced yields in many areas. Wheat harvests over most of Western Europe were record or near-record. The only significant reductions from 1958 crops were those in Italy and Portugal. Italy's acreage was below average; yields, though smaller than in 1958, were still well above average. Portugal had a slightly reduced acreage from 1958 but the sharp decline in production was mainly caused by much lower yields.

Wheat production in <u>Eastern Europe</u> is estimated at 595 million bushels, 19 percent more than the 1958 crop. Yields were up in most countries, the largest increase in Yugoslavia. That country's outturn of 148 million bushels is much above any previous harvest. Yields of 28.1 bushels per acre are almost 10 bushels per acre above the 1958 yields. Increased use of high-yielding Italian varieties is given most of the credit for the spectacular rise.

The <u>Soviet Union</u> reported a substantial reduction in the area seeded to spring wheat. All information confirms earlier reports of prolonged and wide-spread drought in many important regions, which reduced yields. Thus, production appears to be well below the record level of 1958.

Wheat production in Asia is tentatively estimated at 1.8 billion bushels, 6 percent less than last year. Larger outturns in most countries were more than offset by smaller harvests in mainland China and Turkey. The increase was especially marked in India where a harvest of 362 million bushels set a new record, in contrast with the small 1958 crop of 290 million. Unfavorable conditions in China appear to have reduced the crop sharply. Turkey's production is reported down to 190 million bushels from 240 million last year.

Total wheat production in Africa is estimated at 190 million bushels, down 15 million from the large 1958 crop of 205 million bushels, but still above average. Substantial reductions are estimated for former French North Africa but a slight increase is reported for Egypt. Those countries, together with the Union of South Africa, account for about 90 percent of Africa's total

wheat production. As yet, not much information is available on the crop in the Union of South Africe--wheat harvest does not begin there until November.

It is also too early for estimates of crops in other Southern Hemisphere areas. Preliminary prospects point to somewhat smaller wheat acreage in <u>South America</u>. Especially in Argentina, seeded acreage is sharply reduced. This principal producer of the area reports a reduction of at least 10 percent in seeded acreage. If yields are around average, production in that country will be well below the 247 million bushels produced last season. Acreage is also reported considerably smaller in Uruguay.

Conditions in <u>Australia</u> have continued unfavorable and it now seems that the crop will be smaller than the 180 million bushels previously estimated and shown in table 9. A sharp reduction from 1958 is indicated.

## World Rye Production Down 4 Percent

j.

This year's world rye crop is forecast at 1.4 billion bushels, down about 4 percent from the 1958 total of 1.46 billion (table 10). Most of the decrease appears to be in the Soviet Union. Little change is estimated from last year's high level in Poland and West and East Germany. These countries together with the Soviet Union produce about 80 percent of the world rye crop.

Rye production in North America is down 28 percent because of a sharp drop in the U. S. crop from 32.5 million last year to 21 million bushels for 1959. The drop reflects both smaller acreage and lower yields. Canada's estimate shows little change from the small 1958 production.

Rye production in Western Europe is estimated at 270 million bushels, slightly larger than in 1958. The crop is also slightly larger in Eastern Europe, where production is currently estimated at 445 million bushels, compared with 440 million last year. Rye production in the Soviet Union is indicated to be smaller than production last year. In Turkey, the only country in Asia of any importance in rye production, the crop is smaller than the 31 million bushels produced in 1958.

<sup>1/</sup>Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, the crop harvested in the Northern Hemisphere in 1959 is combined with preliminary forecasts for the Southern Hemisphere harvests which will begin late in 1959 and end early in 1960. 2/ Figures refer to harvested areas as far as possible. 2/ Yield per acre calculated from acreage and production data shown, except for incomplete periods. 4/ Preliminary estimates for Northern Hemisphere countries; for Southern Hemisphere, preliminary forecasts based largely on acreage and weather conditions to date. 5/ Estimated totals, which in the case of production are rounded to millions, include allowances for any missing data for countries shown and for other producing countries not shown. 6/ Tentative unofficial estimates for production. 7/ Excludes areas formerly known as Spanish Morocco and Tangier. 8/ Production on European holdings only.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source material, reports of United States Agricultural Attaches and Foreign Service Officers, results of office research, and related information.

<sup>1/</sup> Commercial production of flour (reported by Census) includes flour milled in bond plus the estimated flour equivalent of farm wheat ground for flour or exchanged for flour for farm household use as reported by AMS. 2/ Includes milled-in-bond flour made from imported wheat. 3/ U.S.D.A. procurement for export other than supplies for civilian relief feeding in occupied areas. 4/ Commercial deliveries for export including U.S.D.A. procurement. 5/ Includes other products in terms of flour in addition to flour per se. Includes supplies for civilian relief feeding in occupied areas as well as those for direct use of U. S. Armed Forces. 6/ Includes exports for relief or charity by individuals and private agencies. 7/ Preliminary.

1/ Includes flour and other wheat products in terms of wheat. 2/ Prior to 1937 some new wheat included; beginning with 1937 only old-crop wheat is shown in all stocks positions. The figure for July 1, 1937, including the new wheat, is 102.8 million bushels, which is used as year-end carryover in the 1936-37 marketing year. 3/ Imports include full-duty wheat, wheat imported for feed, and dutiable flour and other wheat products in terms of wheat. They exclude wheat imported for milling in bond and export as flour, also flour free for export. 4/ Includes procurement for both civilian relief feeding and for military food use; military takings for civilian feeding in occupied areas measured at time of procurement, not at the time of shipment overseas. 5/ Exports as here used in addition to commercial exports of wheat, flour and other wheat products, include U.S.D.A. flour procurement rather than deliveries for export. Beginning with 1941-42, actual exports, including those for civilian feeding in occupied areas (deliveries for export) of wheat, flour and other wheat products, in million bushels, were as follows: 27.9; 27.8; 42.6; 144.4; 390.6; 397.4; 485.9; 504.0; 299.1; 366.1; 475.3; 317.8; 217.0; 274.4; 346.3; 549.5; 402.9 and 443.0. 6/ To Alaska, Hawaii, Puerto Rico, Guam, Samoa, Virgin Islands and Wake Island; partly estimated. 7/ Includes exports for relief or charity by individuals and private agencies. 8/ Preliminary. 9/ For the period July-December 1955, known disappearance from the July 1 supply, without an allowance for quantities fed, is about 12 million bushels larger than that indicated by January 1 stocks. This discrepancy may be accounted for by possible inexactness in data, including some duplication in stocks reported in the various positions by different agencies. This discrepancy also occurred in the July-December 1957 period

by 8 million bushels.

Describe exclude shipments by military for civilian feeding and exports of flour from foreign wheat milled in bond.

U. S. wheat and flour used with foreign wheat in milling in bond for export.

J. USDA flour procurement rather than deliveries for export.

W. Shipments, partly estimated, are to Alaska, Hawaii, Puerto Rico, Guam, Samoa, Virgin Islands and Wake Island.

<sup>4/</sup> Salpments, partly estimated, are to Alaska, mewall, Fuerto Rico, Guam, Samoa, Virgin Islands and wake Island.

5/ Includes procurement for both civilian relief feeding and for military food use; military takings for civilian feeding in occupied areas measured at time of procurement and not at time of shipment overseas.

6/ Includes exports for relief and charity by individuals and private agencies.
